Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1, 2, 47-49 are rejected under 35 U.S.C. 102(b) as being anticipated by Funamoto et al (US 6,213,381).

Funamoto et al disclose the method of bonding metal plates comprising the steps of applying a first and second shearing blades of specific shape one onto both sides of overlapping metal plates. Forming a bonded portion by making use of the deformation of each sheared surface during the shearing process, wherein the bonded portion or bonded surface is formed in a oblique direction inclined, less than 75 degrees, with respect to the thickness direction of the metal plate as shown in the figures (col. 21, lines 20-36). The first and second shearing blades are moved in opposing directions shown in figure 11a and b.

Response to Arguments

3. Applicant's arguments filed 12/27/02 have been fully considered but they are not persuasive.

Applicant argues that Funamoto et al fail to teach two blades move opposing to each other and wherein the bonding portion is less than 75 degrees. However, Examiner respectfully disagrees, since Funamoto et al in figure 1, shows that the blade 8 and blade 9 having arrows, indicating that the blades are moving in opposing directions and wherein the bonding angle is the angle relative to the thickness of the metal strip. Since the blade 8 is perpendicular to the strip (1), the bonding angle would be less than 75 degrees or otherwise zero degrees. Therefore, claims 1,2, 47-49 remain rejected..
